

Harin Ryu

Principal Forward Deployed Engineer

Seoul, South Korea | harin.ryu@example.com

PROFILE

Forward deployed engineer with ten years of experience taking enterprise AI products from discovery to sustained production adoption. Combines hands-on full-stack development, eval-driven iteration, cross-functional leadership, and reusable deployment systems.

EXPERIENCE

Principal Forward Deployed Engineer | Nova Systems

2020 – Present

- Owned eight LLM deployments across manufacturing, finance, and public-sector customers; managed scope, sequencing, and delivery risk for three concurrent projects.
- Mapped customer workflows with engineering teams and built Python, TypeScript, and React APIs, review interfaces, and evaluation services with human approval steps.
- Launched four production deployments reaching 1,700 weekly active users; reduced average contract-review time from 52 to 31 minutes in one workflow.
- Built a 2,400-case evaluation suite for correctness, citations, refusal, and latency with weekly regression runs and release rollback gates.
- Shared reproducible long-document citation failures with research and product teams; joint experiments raised citation coverage from 76% to 91% on the customer evaluation set.
- Resolved security and data-boundary blockers through permission isolation and staged releases; created templates and playbooks reused by six engineers.

Senior Full-Stack Engineer | Solar Web

2016 – 2020

- Built B2B web applications, APIs, and data pipelines; led customer integrations and operational handoffs.

SKILLS

Python · FastAPI · TypeScript · React · PostgreSQL · Kubernetes · LLM evaluation · Security requirements · Observability
